

QUALITY THOUGHT

SELENIUM TEST-4

Name: _____ **Batch No:** _____

Note: It is mandatory to write Selenium scripts for all required questions.

- 1) What are TestNG annotations? Explain the purpose of commonly used annotations?
- 2) What is priority in TestNG? How do you control the order of execution of test methods using priority?
- 3) What is DataProvider in TestNG? How do you implement Data Driven Testing using @DataProvider?
- 4) What are the default reports generated by TestNG and where are they located after test execution?
- 5) What is assertion in TestNG? Explain the difference between Hard Assert and Soft Assert.
- 6) What is the difference between @Parameters and @DataProvider in TestNG?
- 7) What is Page Object Model (POM) in Selenium? Why is POM used in automation frameworks? Write a Selenium TestNG script implementing POM for a login page.
- 8) What is a Base Class in Selenium Framework? Why do we create a Base Class and what methods are usually included in it?
- 9) What is parallel execution in TestNG framework? Explain how Selenium tests can run in parallel using thread-count.
- 10) What is Maven in Selenium framework? Why is pom.xml used and what dependencies are commonly added?
- 11) How do you skip a test case in TestNG? How do you rerun failed test cases in TestNG?
- 12) Explain the complete execution flow of a Selenium TestNG Hybrid Framework?
- 13) How do you read data from Excel file using Apache POI? Write a Selenium script example.
- 14) What is Data Driven Testing? How do you implement it using Apache POI and TestNG DataProvider?
- 15) What is Object[][] in Java? Why is it used in TestNG DataProvider?
